**TOA DKK**

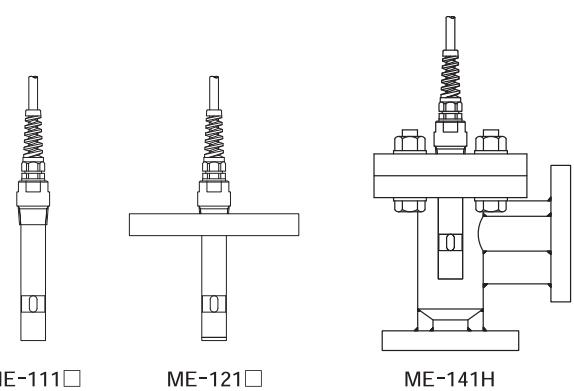

## Electromagnetic Conductivity Detector

## Compact Type ME-100 Serial

It is an electric conductivity detector based on electromagnetic induction action. Combined with a dedicated converter, accurately measures the conductivity of various solutions accurately.

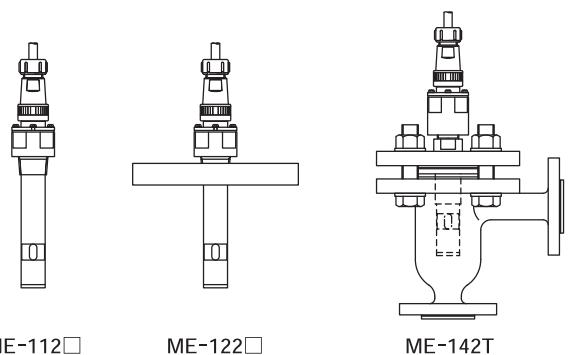

Samples with high corrosiveness and high electrical conductivity are difficult to measure with the electrode method, but electromagnetic induction type detectors are able to measure them. The materials of wet part are C-PVC, PVDF or PFA. The detector can be installed by means of insertion type with tube, drop-in immersion type or flow-through type, etc.

For the robust type ME-6□□,7□□,11T series, please refer to the separate spec sheet.

### Features

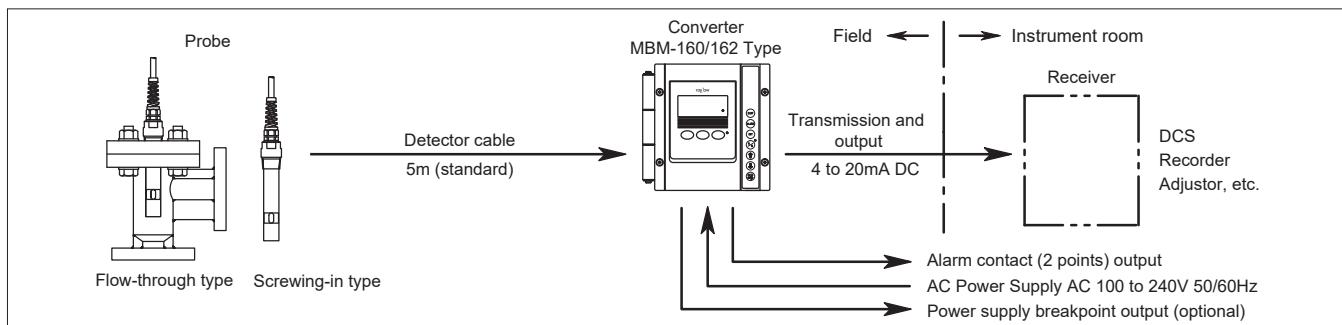

- It covers broad measurement range.  
The minimum measurement range is 0 to 0.5mS/cm (0.05S/m).  
The maximum measurement range is 0 to 2000mS/cm (200S/m) .
- Hydrochloric acid, sulfuric acid, sodium hydroxide, etc. can be converted into concentrations from measured values of conductivity and temperature. So they can be used as a concentration meter in combination with a converter.
- The detector is of vertical core miniature (light weight) with external diameter φ22.5mm (resin layer thickness approx. 1mm). The standard length of detector's cable is 5m, and can be 20m max.
- The detector can be installed outdoor for its drip-proof structure.

### Detector Type

Type	ME-111□	ME-121□	ME-141□	ME-171□	ME-112□	ME-122□	ME-142□	ME-172□
Classification	Detector and cable as one-piece				Detector with separable cable			
Probe	Screwing-in	Flange	Flow-through	Immersion	Screwing-in	Flange	Flow-through	Immersion
Material of wet part	C-PVC, PVDF or PFA							

### System Configuration

## ■ Compact type ME-1□1 Type Serial

Refer to the following table for the compact electrical conductivity detector with direct cable connection (4 types and 12 mo dels).

**Table of Specifications**

Installation	Connection specs	Type	Mat. of wet part	Size	Water sample conditions			Weight
					Temp.	Press	Flow rate	
Screwing-in insertion type with pipe and sink	R <sup>3/4</sup>	ME-111H	High temp. resistant PVC	L. of insertion 123mm	0~65°C	0.3MPa and below	2m/s and below	Approx. 0.5kg
		ME-111F	PVDF		0~100°C	0.5MPa and below	2m/s and below	
		ME-111T	PFA		0~120°C	0.5MPa and below	2m/s and below	
Flange insertion type with pipe and sink	50A JIS 10K FF	ME-121H	High temp. resistant PVC	L. of insertion 96mm~ 2000mm	0~65°C	0.3MPa and below	2m/s and below	Approx. 1.3kg L: 96mm
		ME-121F	PVDF		0~100°C	0.5MPa and below	2m/s and below	
		ME-121T	PFA		0~120°C	0.5MPa and below	2m/s and below	
Flow-through type (incl. box body) with 15A pipe connection	15A JIS 10K FF	ME-141H	High temp. resistant PVC	Space between flanges 110×107	0~65°C	0.1MPa and below	0.5~10L/m	Approx. 2.3kg
	15A JIS 10K RF	ME-141F	PVDF/PFA		0~100°C	0.5MPa and below	0.5~10L/m	Approx. 6kg
	15A JIS 10K RF	ME-141T	PFA		0~120°C	0.5MPa and below	0.5~10L/m	
Immersion type for open-top sink	None	ME-171H	High temp. resistant PVC	Length 200mm~ 2000mm	0~65°C	0.3MPa and below	2m/s and below	Approx. 1.3kg L:500mm
		ME-171F	PVDF		0~100°C	0.5MPa and below	2m/s and below	
		ME-171T	PFA		0~120°C	0.5MPa and below	2m/s and below	

1. The length of detector cable is 5m or 10m, and the total maximum length (incl. detector) can be made up to 20m.

2. The cell constant is 9.0/cm, and the lower limit of measurement range is 0~0.5mS/cm.

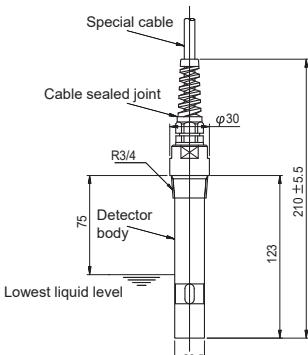

3. The combined converter is of MBM-100A/102A, MDM-135A/137A and MBM-160/162 type.

4. The lower side and circular part of the detector shall be filled with sample water up to 25mm in order not to affect the cell constant.

#### Note:

- The screwing-in insertion type detector with tube and sink can be installed either horizontal or upside-down.
  - The ME-111H Type detector (made of C-PVC) can be used in seawater, river or lake (dam), and can be immersed as drop-in type in water 5m depth. In case of fast flow, please set up protection tube or suspend with an electric wire; please do not put extra load on to the cable.
  - The ME-111F/111T Type detector (body made of fluor resin) shall not be used as drop-in (immersion) since the cable is of PVC type.
  - Refer to the following data for the water temperature range and pressure range of various materials of wet part.
- | Wet part | C-PVC      | 0 to 65°C        | 0.3MPa and below |
|----------|------------|------------------|------------------|
| PVDF     | 0 to 100°C | 0.5MPa and below |                  |
| PFA      | 0 to 120°C | 0.5MPa and below |                  |
- The screws on installation side shall be made of resin.

#### Note:

- Flange immerse (insertion) type detector with tube and sink can be installed either horizontal or upside-down. Moreover, it can be used to replace the flow-through type ME-141 detector.
  - Refer to the following data for the water temperature range and pressure range of various materials of wet part.
- | Wet part | C-PVC      | 0 to 65°C        | 0.3MPa and below |
|----------|------------|------------------|------------------|
| PVDF     | 0 to 100°C | 0.5MPa and below |                  |
| PFA      | 0 to 120°C | 0.5MPa and below |                  |
- The speed resistance of water sample is below 2m/s when at 200mm length. Moreover, since the detector made of PFA is very soft, the length cannot be made over 1,000mm.

#### General Attention

- \*1. In case strong alkali solution, nitric acid, sulphuric acid and organic solution is mixed, since the resistance of C-PVC and PVDF is not sufficient, please select the detector made of PFA.
- \*2. Please ensure to use the same measurement unit of the converter.
- \*3. In case the detector cannot be operated with converter simultaneously, please contact manufacturer for converter type and serial number.

### ● Flow-through type (incl. box body) with 15A pipe connection

**Note:**

1. The flow-through detector with 15A flange connection can be installed on 15A bypass with stop valve.  
If made of C-PVC, the box body is of welding structure; if made of PVDF and PFA, the box body is of FCD400/PFA (casting with PFA lining).  
The space between the flanges of two box bodies is 110x107, and the two box bodies are through to each other.
2. Refer to the following data for the water temperature range and pressure range of various materials of wet part.  
Wet part    C-PVC    0 to 65°C    0.1MPa and below (in case of detector monomer, then 0.3MPa and below)  
              PVDF    0 to 100°C    0.5MPa and below  
              PFA    0 to 120°C    0.5MPa and below
3. The water sample flow rate at 0.5 – 10L/min will be appropriate.

### ● Immersion type for open tank

	ME171-1-□□□□□	<b>Material of wet part <sup>*1</sup></b>
	A .....	ME-171H ..... C-PVC (high-temperature resistant PVC)
	B .....	ME-171F ..... PVDF (polyvinylidene fluoride)
	C .....	ME-171T ..... PFA (fluor resin)
	1 .....	<b>Length of detector</b>
	200mm	
	2 .....	300mm
	4 .....	500mm
	5 .....	1000mm
	6 .....	1500mm

	A .....	<b>Written form</b>
	Japanese	
	B .....	English as designated
	0 .....	<b>Combined converter <sup>*3</sup></b>
	1 .....	Manufacturing simultaneously
		None

**Note:**

1. Regarding the immersion type detector (external diameter φ32) to install above the open-top tank (water tank), the fitting can be ZC-2 type.
2. Refer to the following data for the water temperature range and pressure range of various materials of wet part.  
Wet part    C-PVC    0 to 65°C    0.3MPa and below  
              PVDF    0 to 100°C    0.5MPa and below  
              PFA    0 to 120°C    0.5MPa and below
3. The speed resistance of water sample is below 2m/s when at 200mm length.  
Moreover, since the detector made of PFA is very soft, the length cannot be made over 1,000mm.

**General Attention**

- \*1. In case strong alkali solution, nitric acid, sulphuric acid and organic solution is mixed, since the resistance of C-PVC and PVDF is not sufficient, please select the detector made of PFA.
- \*2. Please ensure to use the same measurement unit of the converter.
- \*3. In case the detector cannot be operated with converter simultaneously, please contact manufacturer for converter type and material type.

## ■ Compact Leadless ME-1□2 Series

Refer to the following table for the miniature leadless electrical conductivity detector (4 types and 12 models).

**Table of Specifications**

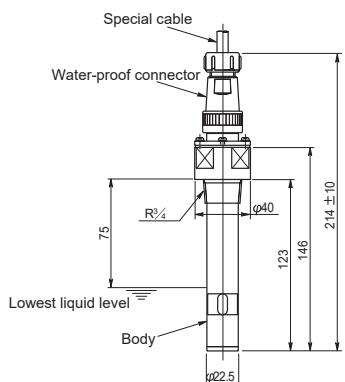

Installation	Connection specs	Type	Mat. of wet part	Size	Water sample conditions			Weight
					Temp.	Press	Flow rate	
Screwing-in insertion type with tube and sink	R <sup>3/4</sup>	ME-112H	High temp. resistant PVC	L. of insertion 123mm	0 to 65°C	0.3MPa and below	2m/s and below	Approx. 0.2kg
		ME-112F	PVDF		0 to 100°C	0.5MPa and below	2m/s and below	
		ME-112T	PFA		0 to 120°C	0.5MPa and below	2m/s and below	
Flange insertion type with tube and sink	50A JIS 10K FF	ME-122H	High temp. resistant PVC	L. of insertion 96mm to 2000mm	0 to 65°C	0.3MPa and below	2m/s and below	Approx. 1kg L: 96mm
		ME-122F	PVDF		0 to 100°C	0.5MPa and below	2m/s and below	
		ME-122T	PFA		0 to 120°C	0.5MPa and below	2m/s and below	
Flow-through type (incl. box body) with 15A tube connection	15A JIS 10K FF	ME-142H	High temp. resistant PVC	Space between flanges 110×107	0 to 65°C	0.1MPa and below	0.5 to 10L/m	Approx. 2kg
	15A JIS 10K RF	ME-142F	PVDF/PFA		0 to 100°C	0.5MPa and below	0.5 to 10L/m	Approx. 6kg
	15A JIS 10K RF	ME-142T	PFA		0 to 120°C	0.5MPa and below	0.5 to 10L/m	
Immersion type for open-top sink	None	ME-172H	High temp. resistant PVC	Length 200mm to 2000mm	0 to 65°C	0.3MPa and below	2m/s and below	Approx. 1kg L: 500mm
